Key Executives & Shareholders: **Caroline Muir 51%**
Niall Beazley 49%
Accreditations: **Niall Beazley - Managing, Sales & Operations**
Caroline Muir - Finance, Administration & Marketing
Brand names: **SkyWalker MIS - Entelec Control Systems; Talon & VISCE – NDI Recognition Systems; Motion Track – Imaging Solutions; FleetVu - Mobile; Arecont Vision MegaPixel Cameras – High Definition Surveillance systems; Ex-Sight – Facial Recognition Systems; Brijot – Passive Millimetre Scanning solutions.**
Export Countries: **Mozambique, Botswana, Zimbabwe, Zambia, Namibia, Malawi, Angola, Brazil, Middle East and others.**

Solutions:

**MIS
&
Digital
Recording**

Vision Catcher specialises in Digital Integration Solutions. We supply a range of product and system solutions built according to each client's specifications. A large part of the specialisation requires integration and interfacing between different and disparate systems. We combine these into the **Sky-Walker** Management Information Systems from **Entelec Control Systems** that integrates CCTV, Access, Fire & Safety, Intrusion and other Security Systems with Building Management Systems (BMS) such as HVAC, lifts & escalators, electrical & lighting, as well as Supervisory Control and Data Acquisition (SCADA) or Programmable Logic Controllers (PLC) systems and devices, even providing interfaces to facilities management options.

Our solutions look to integrate the various proprietary and non proprietary devices into an open architecture solution to give the client a single interface control. This includes use of legacy products that would otherwise require replacement, ultimately allowing a cost effective route forward for system upgrades and onward development. This modular approach gives you the choice of a phased and stepped approach for your total system integration. Clients include BT World, Fortis Bank, Vodafone, ABM AMRO, Barcelona and Copenhagen Airports.

Vision Catcher is a market leader in solution provision.

ANPR

NDI Recognition Systems is the market leader in Licence Plate Recognition. Offering a range of products for speeds up to 260km with a 98% success rate. Providing Access Control, Journey Time Averaging, Free Flow Toll Roads, Parking Guidance & other solutions. The Back Office Facility allows for multiple databases covering Licence issues, roadworthiness, insurance, etc. Live, continuous, GSM & wifi interfacing support a national & international html ability currently running 100 million plates.

Arecont Vision Cameras
"High Definition Surveillance Systems"

We offer the Arecont Vision range of High Definition Surveillance Cameras offering from 1 to 20 million pixels per image (1-20MP). The sophistication of the camera and software allows for the coverage of an extensive area with options for lens change to facilitate what is required. The high pixel content of these cameras allows zoom functionality better than a PTZ camera in a simple and effective way, but more importantly you can do this on recorded information as well as live information. This is an ideal product for soccer stadiums, parking areas, mines & Corporates; enhancing existing systems. ANPR, POS and Audio integration available.

Brijot Scanners

Brijot provides a non-intrusive passive millimetre detection option for solids, plastics, liquids and other materials that might be secreted on the body. The handheld AllClear wand enables instant checks to be setup at key points, while the mobile and static versions of Gen2 and ScanPort provide a quick and easy way of scanning multiple employees at a high rate per minute. The passive scanning does not reveal in detail parts of the body, but will pick up a small coin the size of a R1 piece, a USB stick, Intellectual Property in the form of DVD or CD, even printed paper, down to the liquids and possible drug substances the person may be carrying.

Motion Track
"Imaging & threat analysis"

Motion Track develops integrated video analytics solutions. MT100 is designed to improve current VMD performance. MT500 counts, sizes, classifies and identifies products on conveyor belts & in similar setups. Recent tests achieved a 99.985% read rate over an 8 hour period detailing more than 7,500 items.

Mobile DVRs

FleetVu is a total mobile solution catering for a range of vehicles; trains, trucks, buses, CIT, ships and even aeroplanes. FleetVu is the system of choice for Bombardier in Europe where there are more than 6,000 units in use. It is an interactive digital security system for any number of cameras, audio, alarms, network and offsite control with full monitoring capabilities covering 65 vehicles simultaneously at 2mbytes per second. GPRS, 3G and Wireless are all available. **FleetVu** is a market leader running complete On board train systems and is successfully running in diverse solutions within South Africa.

Ex-Sight
"Facial Recognition Systems"

Facial Recognition must be handled carefully. Bespoke solutions under the right lighting and parameters will ensure a correct face read. 100,000 templates read per second with either verification (1:1) or identification (1:N) searches from existing cameras can all be achieved. A well priced system with multiple offerings, extending from basic face tracking, Suspect, Constant Face (CFAS), Access & threat analysis.

Interactive Vetrina

Vetrina provides an interactive imaging display with a touch/touchless screen option to convey your marketing and ultimately sales to any party at any time of day; whether you are open or closed. The information is still conveyed and allows the person to interact in the manner that you wish. More sales with little further effort!
